

Google Glass Pilot

SUMMER 2015

Challenge

Manufacturing and assembly workers need access to reference guides in order to do their job. Laptops and tablets were not effective due to distance from conveyer belts, lack of flat surfaces in tractors, and because they require workers to use their hands.

Objective

We worked closely with Google and Proceedix to provision and deploy 25 smartglasses for the pilot to focus on these areas of worker improvement:

- Assembly
- Quality (Inspection)
- Welding
- Field Service
- Supply Chain
- Factory Tours

Hardware

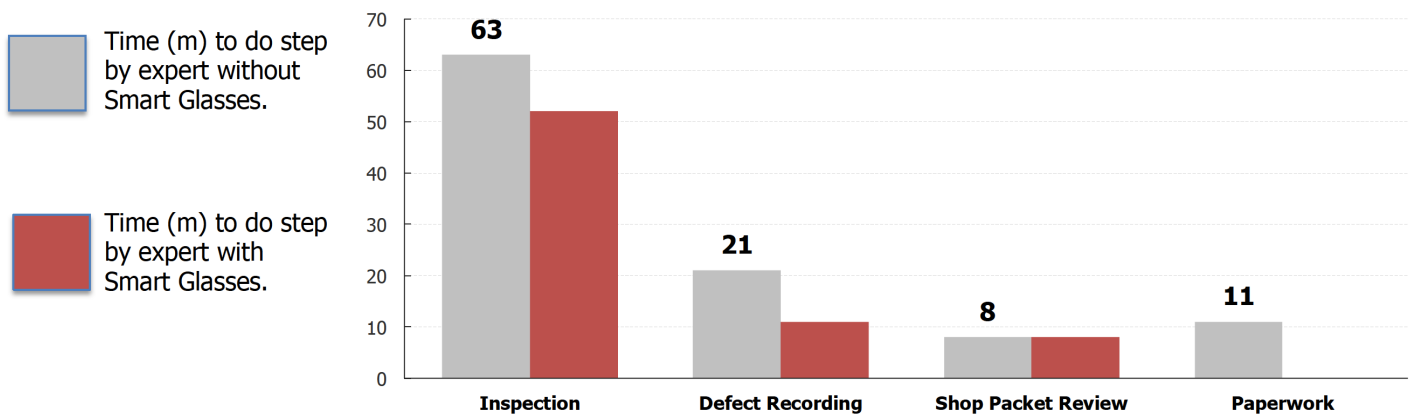

GOOGLE GLASS

More Information

Results

* The paperwork step was totally eliminated when using smart glasses

- **30% increase** in productivity
- Scaled from 25 to 180 smartglasses
