

Wearable Environment Manager™

AUGMATE'S Wearable Environment Manager (WEM) enables enterprises to manage and deploy wearable technologies and solutions in a secure and scalable fashion. Our platform aggregates sensor data through a secured network of wearable devices and beacons, allowing enterprises to analyze and optimize their workforce at scale.

Designed with Flexibility

WEM can be deployed on-prem or over the cloud, and can support multiple smart glass models and application solutions running seamlessly in the same environment.

Enterprise-friendly Features

Ease of Implementation

- Quickly provision and manage wearable and beacon devices through a centralized management portal.

Remote Security Policies

- Whitelist applications, configure seamless connectivity settings, and deliver enhanced device security settings through Over-the-Air security updates.

Device Security

- Lock down end user access to device accessories which prevent unintended usage of wearables in the workplace.

Secure Architecture

- Unique system architecture prevents unauthorized access from any front.

Seamless Communication

- System level messaging and notifications.
